Who is this guide for?

If wallets, exchanges, and transfers still feel confusing, that's okay.

With this checklist, you can quickly review the most important things.

IMPORTANT

Why do you need this checklist?

With crypto, **one mistake** can be hard to undo.

If you enter an address with even one wrong character, or choose the wrong network, you could permanently lose your assets.

But if you follow the basic rules, you can avoid most risks.

AT A GLANCE

What this guide covers

- How to choose a safe exchange
- What to check before making your first purchase
- Essential checks before sending coins
- The basics of wallet security
- Warning signs of scams and how to respond

It focuses on **practical, ready-to-use advice** rather than theory.

Essential Safety Checklist

Check each item below one step at a time.

Do not move on to the next step until the current one is complete.

Before Choosing an Exchange

- Use major domestic and international exchanges. (Upbit, Bithumb, Binance, etc.)
- Make sure you are on the official website URL. Watch out for lookalike fake sites.
- Check whether two-factor authentication (2FA) is available.
- Confirm that customer support contact information is listed.
- Search the exchange name + "scam / reviews" on a search engine.

Before Your First Purchase

- Start with a **small amount**. Avoid putting in a large sum at first.
- Review the trading fee and withdrawal fee structure in advance.
- Check the coin information on the official site before buying.
- Only invest money you can afford to lose.
- Check whether there is a withdrawal lockup period.

Before Transferring

- Carefully verify the recipient address one character at a time.
- Make sure the network matches. (ERC-20, TRC-20, BEP-20, etc.)
- First, make a **small test transfer**.
- Be careful of malware that alters clipboard addresses.
- Transfers cannot be canceled after they are sent. Check once more.

Wallet Security and Scam Prevention

Review the following principles in order. The key is to remember them in short, clear terms.

Basic Wallet Security Principles

- Write down your seed phrase on paper and store it offline
- Do not take a photo of your seed phrase or save it digitally
- Never share your seed phrase with anyone
- Download wallet apps only from the official app store
- Consider using a hardware wallet for large amounts

Warning Signs of Scams

- "Send it and get 2x back" is 100% a scam
- Ignore social media investment ads that use celebrity photos
- Be cautious of "guaranteed high returns" in Telegram or Kakao group chats
- Do not click links in login alert emails; access the site directly
- Always verify wallet connection requests from unfamiliar apps

No service will ever ask for your seed phrase. The moment you enter it, your wallet is exposed.

4 Common Mistakes Beginners Make

These mistakes are very common for beginners. Read the examples below and prevent them in advance.

01 Starting with a large amount

Many people start by putting in too much money. Learn the full process first with a **small amount**.

02 Not checking the network

The same coin can be lost forever if the network is different. Always check before sending.

03 Entering or sharing the seed phrase

No service will ever ask for your seed phrase. The moment you enter it, your wallet is exposed.

04 Reacting to urgent offers

Words like 'only today' or 'right now' are signs of a scam. Don't rush—verify first.

Possible impact: mistakes like these can lead to lost funds, exposed wallets, or falling for scams. Pause, verify, and double-check every step.

3-Second Checklist

Before taking action, pause for just 3 seconds and check the items below.

This habit protects your assets.

Before sending

- Are the last 4 characters of the address correct?
- Are both networks the same?
- Have you sent a test transfer first?

Before clicking

- Is the official URL correct?
- Have you verified the sender?
- Does the offer seem too good to be true?

Before connecting

- Is it a verified app/site?
- Do you understand the permissions being requested?
- If you're unsure, don't connect.

Things you should never do

-  Never share your seed phrase with anyone
-  Never click links in emails/messages from unknown sources
-  Never send crypto to offers that promise to "double" it
-  Never download wallet apps from unofficial sources
-  Never invest money you can't afford to lose
-  Never skip the test transfer

SAFETY FIRST

CRYPTO ACADEMY

Safety Comes First.

Returns matter too. But protecting your assets comes first.

Keep following this checklist every time until it becomes a habit.

In crypto, the most important skill is not fast judgment, but safe habits.

Check it

Before every trade, use the checklist.

Make it a habit

Turn the 3-second check into an automatic response.
